BUILD MORE THAN A WEBSITE

With Zoho One, you get more than a code-free, professional website. You get enterprise-level applications, like a CRM and an email marketing app, to make your website the front-end of your business.

Register Your Domain

The first step to establishing a brand is reserving a domain. Direct your domain to your Zoho Site, or register through Zoho.

Build Your Site

Thanks to Zoho One's no-code website builder, anyone can quickly build a professional website. Choose a template, then drag and drop pre-made sections and elements to get the right look, feel, and functionality.

Optimize And Personalize

Optimize and personalize your website to increase engagement and conversions. Track performance with intuitive, visual reports. Run A/B tests to experiment with new ideas before actually changing your website. Serve content to visitors based on their location and other criteria.

Add Forms To Collect Information

With Zoho One, you get powerful, customizable forms to use to collect visitor information. These forms allow you to automatically add the info you collect to your CRM, email marketing lists, or help desk so you can organize and respond to the information quickly.

Connect With Your Website Visitors

Engage your website visitors with live chat and bots. Allow visitors to reach out for help, or actively pursue visitors on particular web pages to make a sale.

Offer Subscriptions

Selling products and services through a subscription model has never been easier. Zoho One gives you a subscription management application to create subscription tiers quickly and add them to your website.
